Getting a second opinion on the health of your portfolio is as important as a second opinion before surgery. Two different financial advisors may give you two vastly different opinions. It's critical … [Read more...]

Pick Your Plastic: Debit or Credit?

According to a Federal Reserve study, Americans use debit cards more often than credit cards, but the total value and the average value of credit card transactions are higher than those of debit card transactions.

While consumers made 69.5 billion transactions using debit cards, the total value of these transactions was $2.56 trillion, with an average transaction value of $37. Credit card usage resulted in 33.8 billion transactions, with a total value of $3.16 trillion, and a $93 average transaction value.[1]

This reflects fundamental differences. A debit card acts like a plastic check and draws directly from your checking account, whereas a credit card transaction is a loan that remains interest-free only if you pay your monthly bill on time. For this reason, people may use a debit card for regular expenses and a credit card for "extras." However, when deciding which card to use, you should be aware of other differences.

Fraud protection

In general, you are liable for no more than $50 in fraudulent credit card charges. For debit cards, a $50 limit applies only if a lost card or PIN is reported within 48 hours. The limit is $500 if reported within 60 days, with unlimited liability after that. A credit card may be safer in higher-risk situations, such as when shopping online, when the card will leave your sight in a restaurant, or when you are concerned about a card reader. If you regularly use a debit card in these situations, you may want to maintain a lower checking balance and keep most of your funds in savings.

Merchant disputes

You can dispute a credit card charge before paying your bill and shouldn't have to pay it while the charge is under dispute. Disputing a debit card charge can be more difficult when the charge has been deducted from your account, and it may take some time before the funds are returned.

Rewards and extra benefits

Debit cards offer little or no additional benefits, while some credit cards offer cash-back rewards, and major cards typically include extra benefits such as travel insurance, extended warranties, and secondary collision and theft coverage for rental cars (up to policy limits). Of course, if you do not pay your credit card bill in full each month, the interest you pay can outweigh any financial rewards.

Credit history

Using a credit card responsibly can help you build a positive credit history because your usage is reported to credit reporting agencies. A debit card has no effect on your credit.

Money management

Using a debit card helps ensure that you don't overspend. Because purchases are deducted right away from your checking account, you aren't in the dark about how much you're spending. You can quickly check your balance online or at an ATM, and see which purchases are pending.

A credit card offers you the flexibility of tracking your monthly expenses on one bill, which can help you establish and stick to a realistic budget. A credit card can also be used in emergencies.

Considering the additional protections and benefits, a credit card may be a better choice in some situations — but only if you pay your monthly bill on time. The good news is, you don't have to choose just one option.

Shopping for a New or Used Car

Should you buy a brand-new car or a used one? Consider these factors.

It's time to replace your current car. But should you buy a new car or a used one? Consider the following advantages and disadvantages of each as you shop around for the vehicle that's right for you.

Buying a new car

Advantages. That new-car smell, a clean interior, and the latest technology and safety features...there's no denying the appeal of buying a new car. Aesthetics aside, there is an additional advantage to buying new: starting with a blank slate. You won't need to worry about how the previous driver treated the vehicle. Ownership of a new car comes with the freedom to decide whether to modify the vehicle, how much to drive it, and how much insurance to carry (although your lender may impose some minimum requirements if you take out a loan to buy the car). Bear in mind that there are also state requirements as to how much insurance you need.

The warranty on a new car is typically much better than a used one, offering you greater protection against any defects that may cause your car to malfunction in the first few years of ownership. A new vehicle also comes with benefits like roadside assistance, higher fuel efficiency standards, and the latest safety features. These features help make your car safer to drive, which can provide you with peace of mind.

Disadvantages. The major downside of buying a new car is the hit it will take on your wallet. New cars tend to cost more than used cars for the same make and model, and they also depreciate in value more quickly. In fact, a vehicle loses the majority of its value in the first few years of ownership.

And remember, your new car won't stay new forever. Eventually, the new-car smell will fade, dents and scratches could appear, and the interior will experience wear and tear.

Buying a used car

Advantages. Even if you can afford a new car, buying a used car can be a smart alternative. In addition to saving on the upfront cost, you're also likely to save on insurance because used cars tend to be less expensive to insure than new cars.

Compared to new vehicles, used vehicles tend to depreciate less rapidly. Chances are that a used car's previous owner paid for the bulk of depreciation.

Since most modern cars can go 100,000 miles or more with few mechanical problems, you might not even notice a difference between buying a late-model used car with low mileage and buying a new car.

Disadvantages. A used vehicle comes with many unknowns. You probably won't know why it was traded in or how it was treated by the previous owner. As a result, you may need to be prepared to pay for required maintenance sooner than you would on a new car. You'll want to have a reputable mechanic check out a used vehicle before you buy it. Though you'll have to pay a mechanic for this service, it could end up saving you from paying costly repair bills down the road.

Bear in mind that your choice of models and options is much more limited if you decide to buy a used car. If you have your heart set on a specific kind of car or certain features, this might mean that you'll need to spend a much longer time shopping around.

Additional considerations

Whether you choose to buy a new or used car, make sure you consider the following questions as you go through the car shopping process:

- What do you like and dislike about your current car?
- How will you use the car? Will it be a commuter vehicle that's driven on highways daily, or will it be used less frequently around town?
- Do you need a larger car with a roomy trunk and plenty of seating to accommodate your family, or will a smaller two-door car suit your needs?
- What kinds of features are on your wish list? Do you want a car with the latest technology, or one with a leather interior? Is there a particular body style that you'd favor over another?

If you prefer to trade in your car for a new one every few years, explore leasing as an alternative to buying a new car. Monthly lease payments are generally lower than the payments on a loan to purchase the same vehicle. But leasing a car could mean that you're required to carry more insurance than if you purchase the car. Plus, lease contracts can be confusing, so make sure you know exactly how they work to avoid paying more than you need to.

Buying a car is an important financial decision. Do your research and understand how this purchase will affect you in the short term and the long term to make the most out of your new ride.

Where Relationships Come First

Open communication and teamwork are especially important when it comes to saving and investing for retirement.

Marriage and Money: Taking a Team Approach to Retirement

Now that it's fairly common for families to have two wage earners, many husbands and wives are accumulating assets in separate employer-sponsored retirement accounts. In 2018, the maximum employee contribution to a 401(k) or 403(b) plan is $18,500 ($24,500 for those age 50 and older), and employers often match contributions up to a set percentage of salary.

But even when most of a married couple's retirement assets reside in different accounts, it's still possible to craft a unified retirement strategy. To make it work, open communication and teamwork are especially important when it comes to saving and investing for retirement.

Retirement for two

Tax-deferred retirement accounts such as 401(k)s, 403(b)s, and IRAs can only be held in one person's name, although a spouse is typically listed as the beneficiary who would automatically inherit the account upon the original owner's death. Taxable investment accounts, on the other hand, may be held jointly.

Owning and managing separate portfolios allows each spouse to choose investments based on his or her individual risk tolerance. Some couples may prefer to maintain a high level of independence for this reason, especially if one spouse is more comfortable with market volatility than the other.

However, sharing plan information and coordinating investments might help some families build more wealth over time. For example, one spouse's workplace plan may offer a broader selection of investment options, or the offerings in one plan might be somewhat limited. With a joint strategy, both spouses agree on an appropriate asset allocation for their combined savings, and their contributions are invested in a way that takes advantage of each plan's strengths while avoiding any weaknesses.

Asset allocation is a method to help manage investment risk; it does not guarantee a profit or protect against loss.

Spousal IRA opportunity

It can be difficult for a stay-at-home parent who is taking time out of the workforce, or anyone who isn't an active participant in an employer-sponsored plan, to keep his or her retirement savings on track. Fortunately, a working spouse can contribute up to $5,500 to his or her own IRA and up to $5,500 more to a spouse's IRA (in 2018), as long as the couple's combined income exceeds both contributions and they file a joint tax return. An additional $1,000 catch-up contribution can be made for each spouse who is age 50 or older. All other IRA eligibility rules must be met.

Contributing to the IRA of a nonworking spouse offers married couples a chance to double up on retirement savings and might also provide a larger tax deduction than contributing to a single IRA. For married couples filing jointly, the ability to deduct contributions to the IRA of an active participant in an employer-sponsored plan is phased out if their modified adjusted gross income (MAGI) is between $101,000 and $121,000 (in 2018). There are higher phaseout limits when the contribution is being made to the IRA of a nonparticipating spouse: MAGI between $189,000 and $199,000 (in 2018).

Thus, some participants in workplace plans who earn too much to deduct an IRA contribution for themselves may be able to make a deductible IRA contribution to the account of a nonparticipating spouse. You can make IRA contributions for the 2018 tax year up until April 15, 2019.

Withdrawals from tax-deferred retirement plans are taxed as ordinary income and may be subject to a 10% federal income tax penalty if withdrawn prior to age 59½, with certain exceptions as outlined by the IRS.

What is the employment situation report, and why is it important to investors?

Each month, the Bureau of Labor Statistics publishes the Employment Situation Summary report based on information from the prior month. The data for the report is derived primarily from two sources: a survey of approximately 60,000 households, or about 110,000 individuals (household survey), and an establishment survey of over 651,000 worksites.

Results from each survey provide information about the labor sector, including the:

- Total number of employed and unemployed people
- Unemployment rate (the percentage of the labor force that is unemployed)
- Number of people working full- or part-time in U.S. businesses or for the government
- Average number of hours worked per week by nonfarm workers
- Average hourly and weekly earnings for all nonfarm employees

According to the Bureau of Labor Statistics, when workers are unemployed, they, their families, and the country as a whole can be negatively impacted. Workers and their families lose wages, and the country loses the goods or services that could have been produced. In addition, the purchasing power of these workers is lost, which can lead to unemployment for yet other workers.

Investors pay particular attention to the information provided in this report. For instance, a decreasing unemployment rate may indicate an expanding economy and potentially rising interest rates. In this scenario, stock values may rise with expanding corporate profits, while bond prices may fall for fear of rising interest rates. Advancing wages may also be a sign of higher inflation and interest rates, as well as greater economic productivity.

Generally, the Employment Situation Summary report provides statistics and data on the direction of wage and employment trends — information that can be invaluable to investors.

What is gross domestic product, and why is it important to investors?

GDP, or gross domestic product, measures the value of goods and services produced by a nation's economy less the value of goods and services used in production. In essence, GDP is a broad measure of the nation's overall economic activity and serves as a gauge of the country's economic health. Countries with the largest GDP are the United States, China, Japan, Germany, and the United Kingdom.

GDP generally provides economic information on a quarterly basis and is calculated for most of the world's countries, allowing for comparisons among various economies. Important information that can be gleaned from GDP includes:

- A measure of the prices paid for goods and services purchased by, or on behalf of, consumers (personal consumption expenditures), including durable goods (such as cars and appliances), nondurable goods (food and clothing), and services (transportation, education, and banking)
- Personal (pre-tax) and disposable (after-tax) income and personal savings
- Residential (purchases of private housing) and nonresidential investment (purchases of both nonresidential structures and business equipment and software, as well as changes in inventories)
- Net exports (the sum of exports less imports)
- Government spending on goods and services

GDP can offer valuable information to investors, including whether the economy is expanding or contracting, trends in consumer spending, the status of residential and business investing, and whether prices for goods and services are rising or falling. A strong economy is usually good for corporations and their profits, which may boost stock prices. Increasing prices for goods and services may indicate advancing inflation, which can impact bond prices and yields. In short, GDP provides a snapshot of the strength of the economy over a specific period and can play a role when making financial decisions. All investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful.
